

FEAR FREE VICTORY VISITS

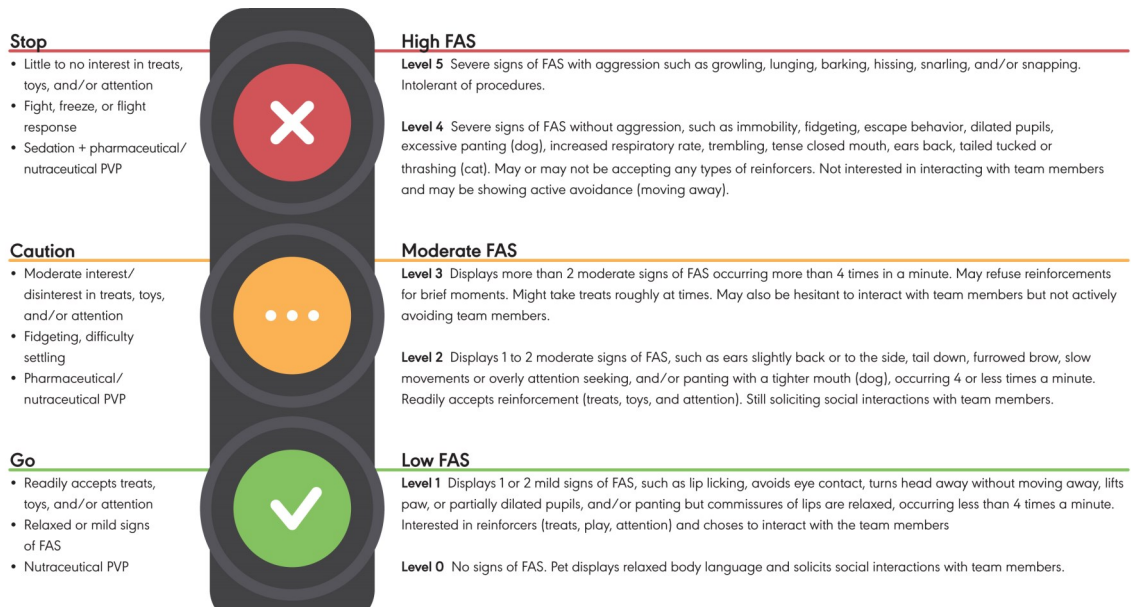

A proactive approach to reducing stress in patients who are fearful of visits to the vet

SUITABLE FOR:

- Patients with moderate to high FAS - Fear/Anxiety/Stress (2+)

GOALS:

- Practical skills to improve the pet's emotional state and minimise FAS
- Improve ease of handling by making visits less stressful
- The use of Pre-Visit-Pharmaceuticals (PVPs) & sedation to help the patient feel calmer during veterinary visits
- Implementing a muzzle training plan to keep everyone safe
- Working together as a team, clients and vet staff, to look after the physical and emotional wellbeing of patients

VICTORY VISIT STEPS:

- Email us to gain quick access to our comprehensive Fear Free resource kit
- Complete our pre-visit questionnaire and closely liaise with our Fear Free Representatives
- Initial training consultation (**\$210**) - through history taking, management strategies, achievable goal setting and a comprehensive training plan will be covered in our one hour consult (in home / online or in clinic)
- Follow up Victory Visit sessions (**\$30**) are 15 minute sessions in the clinic - positive experiences and training exercises are the focus
- There is no set number of Victory Visits that we recommend, as each patient has individual needs. However, the more training we can do, the better the outcome.
- NB: For patients under the care of a Veterinary Behaviourist the Initial Training Consult (\$210) is not a requirement - as the VB will have laid out a structured plan for the client and veterinary team to follow.
